

Glo-Sho Clear Enamel

Equinade Glo-Sho Clear Enamel has been designed to enhance the natural appearance of your horse's hooves. **Glo-Sho** is a high gloss, neutral enamel which is easy to apply and gives a remarkable shine to all hooves.

Glo-Sho Enamel is fast drying to help prevent sand and dirt adhering to hooves before they dry. The durable coating remains on even during damp and wet conditions. Available in a convenient 250ml or 500ml can with a brush attached to the lid. You won't get caught out on show day without a brush!

Suggestions for Best Results

Prepare the hooves prior to applying **Equinade Glo-Sho Enamel** by clipping the hair back from the top of the hoof line. This creates a clean line along the hoof edge and prevents enamel from getting on the hair. Lightly sand the hoof wall using a fine grade paper or sanding block to provide a smooth surface and give the best possible appearance. Apply **Glo-Sho** thickly and smooth it with the brush.

For best results, the hoof should be dry and clean before applying **Glo-Sho**. One coat is generally sufficient. The enamel can be removed using mineral turpentine.
